

Alberto Tuveri

Software Engineer · Full-Stack · AI Integration

+39 375 880 9005 · albertotuveri@gmail.com · linkedin.com/in/albertotuveri · github.com/GitAlboBis

SUMMARY

Full-stack engineer with hands-on experience building production-grade web applications, real-time systems, and AI-powered agents. Comfortable across the entire stack — from database schema design and security hardening to responsive UI and CI/CD pipelines. B.Sc. in Computer Science, University of Camerino (2026).

WORK EXPERIENCE

ALS MCL Civitanova

Jan 2026 – Present

Full-Stack Developer · Freelance · Marche, Italy

Badante24h — production PWA matching families with caregivers in the Italian home-care market.

- Architected and shipped a full production PWA (Next.js 15 App Router, React 19, TypeScript strict, Supabase) with full offline support via a custom Service Worker (Serwist) and VAPID-signed Web Push Notifications.
- Built real-time messaging between families and caregivers using Supabase Realtime (WebSocket) with event-driven subscriptions — a core product feature enabling instant in-app communication and integrated push notifications.
- Engineered sub-second geospatial caregiver search using PostGIS 3 (GiST indexes, WGS-84 geography type), with interactive maps via Leaflet/React-Leaflet and open-source geocoding (Photon + Nominatim) — avoiding costly third-party map APIs entirely.
- Hardened platform security end-to-end: Row-Level Security on every sensitive table, RBAC middleware (Next.js), HSTS, restrictive CSP whitelist, and VAPID-signed push — achieving zero known auth vulnerabilities at launch.
- Reduced observable error blind-spots to near-zero by integrating Sentry across 3 runtime layers (client / server / edge) with a tunnel route bypassing ad-blockers, enabling full production error traceability.
- Delivered a localised (IT/EN) admin dashboard for caregiver identity verification, server-side image optimisation (Sharp), and automated CI/CD with GitHub Actions — enabling solo deployment cycles under 5 minutes.

DOIT S.r.l

Nov 2025 – Feb 2026

AI & Software Developer · Internship · Fabriano, Italy

- Designed and delivered a voice-powered AI agent for Microsoft Teams that enables hands-free appointment management via audio notes: users can create or update meetings, search colleagues and Dynamics 365 contacts, add new contacts, and send meeting invitations — all through natural-language speech input processed by Azure Speech Services and orchestrated via Copilot Studio and Power Automate.
- Built the Pro-Code front-end in Angular + TypeScript that bridges the Low-Code automation layer, keeping UX consistent across Teams and the standalone web app.
- Integrated Azure Speech Services for real-time speech-to-text input, enabling hands-free interaction for field users — a feature previously absent from the client's toolset.

Istituzione Paritaria Scuole Boccaccio

Jan 2019 – Jan 2020

Network Technician Intern · Iglesias, Sardinia · School-Work Alternance

- Planned and executed full structured-cabling of a two-floor school building; configured access points and switches to deliver stable connectivity across 20+ classrooms.

SKILLS

Core: TypeScript · JavaScript (ES2024) · Python · Java · C / C++ · C#

Front-End: React 19 · Next.js 15 · Angular · Tailwind CSS · Framer Motion

Back-End & DB: Node.js · Spring · Supabase · PostgreSQL · PostGIS · MySQL

Cloud & DevOps: Azure (AD, Speech) · GitHub Actions · Sentry · Vercel

AI & Low-Code: Microsoft Copilot Studio · Dataverse · Dynamics 365 · Power Automate

Testing & Tooling: Vitest · Playwright · ESLint · Prettier · Git

Languages: Italian (Native) · English B1 — C1 in progress

EDUCATION

University of Camerino

Jan 2022 – Apr 2026

B.Sc. in Computer Science · Camerino, Italy

Thesis: [From Autocomplete to Agentic Orchestration: Architectural Analysis and Security of OS-Level Agents](#)

Analysed the architectural evolution from deterministic code completion to autonomous agentic systems (MCP, RAG, multi-agent orchestration); mapped OS-level attack vectors (prompt injection, tool poisoning, MAS kill chain) against MITRE ATLAS and OWASP Agentic Top 10; proposed Zero-Trust defence strategies for enterprise agentic pipelines.

Istituzione Paritaria Scuole Boccaccio

Sep 2017 – Jan 2020

IT Technical Diploma · Iglesias, Sardinia

PROJECTS

Agricultural Supply Chain Platform · Academic · University of Camerino ·

github.com/daveeCity/IDS_GROUP_PROJECT

Software Engineering exam project · Java · Spring Boot · Spring Security · PostgreSQL · JWT · REST · Unified Process · Design Patterns · UML

- Designed and built a multi-actor supply chain management platform (10 roles: producers, curators, animators, buyers) following the Unified Process (UP): from requirements and use-case modelling through analysis and design iterations to a layered Spring Boot implementation (MVC, Repository + Service Layer, GRASP principles) with JWT-based RBAC — team of 3, 96 commits.
- Applied Gang-of-Four Design Patterns throughout the codebase; modelled a relational PostgreSQL schema linking producers, products, certifications, events and marketplace orders, exposed via REST APIs with geographic search support and documented with full UML artefacts (use cases, BCE analysis classes, design classes, sequence and activity diagrams).
